

SATELLITE TRACKING OF PEOPLE LLC

{about us}

INDUSTRY LEADERSHIP

Since its inception in 2004, Satellite Tracking of People LLC (STOP) has been a leader and innovator in the electronic monitoring industry. We introduced the first one-piece Global Positioning System (GPS) monitoring device, BluTag, and have since enhanced its functionality and expanded our suite of monitoring tools. Since STOP's inception, we have accomplished many "firsts," which are highlighted below.

- Only company offering GPS blocking detection technology (patent pending)
- Incorporation of enhanced secondary location technology using the strength of the cellular telephone tower signal
- Integration of radio frequency (RF) functionality into a one-piece GPS device to enhance supervision
- Transmission of data using a standard analog/landline telephone connection with a one-piece GPS monitoring device
- VeriTracks, our Internet-based monitoring application, eliminates the need for supervising agencies to download applications onto its IT network or individual computer work stations
- Automated Crime Scene Correlation tool, which is part of VeriTracks, can help law enforcement personnel solve crimes faster
- Integration of high-resolution aerial maps into VeriTracks
- Lifetime warranty and no-questions-asked return policy

TECHNOLOGY IS A TOOL, NOT A REPLACEMENT

We recognize and understand technology provides tools designed to help supervising officers perform their

job better. No hardware or software in an electronic monitoring system can effectively replace the critical human interaction between supervising officer and enrollee. Technology enhances and streamlines how supervising officers monitor enrollees on a daily basis. Because of this knowledge, our company is committed to manufacturing the highest quality, most dependable enrollee monitoring hardware and software to better support the daily responsibilities of supervising officers.

GRADUATED SANCTIONS

Our monitoring system offers supervising agencies the flexibility to increase or decrease any given enrollee's intensity of supervision with a single system. Whether enrollees require RF, GPS or voice verification monitoring, STOP offers the equipment and technology with a single login. Supervising officers need only enter the enrollee information and schedules once.

PERSONALIZATION

STOP knows every supervising officer manages his or her case load a little differently and prefers to view specific information first when logging into VeriTracks. STOP meets this need by allowing supervising officers to personalize the home page of VeriTracks. Supervising officers select what information to display once logged into VeriTracks, so they can work more efficiently. They can also re-arrange the order of the display as often as necessary.

Supervising officers can personalize how they receive notifications about events. They can receive certain notifications through email, fax, page or text message during designated times of the day or night. Then during off-hours supervising officers can choose another method to receive notifications if that is their preference.

Supervising agencies have many options available from STOP's suite of equipment to meet specific needs of enrollees and legislative mandates.

Our optional auxiliary equipment can be used when geographic factors impact the monitoring of enrollees, such as insufficient cellular telephone network coverage or living in a group residential facility.

GUARANTEED EQUIPMENT DELIVERY

Because STOP is the original equipment manufacturer of BluTag, BluBand, BluBox, BluHome, BluScan and Stalker Alert, we guarantee we can provide supervising agencies with the equipment they need when needed. While we have little to no control over the ability of any shipping company to deliver packages on time, we do control 100 percent of the production schedule for our equipment. When supervising agencies receive short notice for an upcoming surge in enrollments, STOP can provide the requisite equipment. Some of our customers have tested this guarantee and we passed each time. We have confidence in our ability to meet the equipment needs of supervising agencies better than any other vendor in the industry.

EXECUTIVE MANAGEMENT TEAM

STOP has assembled the most qualified electronic monitoring team in the industry today. Our executive management team consists of corrections and technology professionals, which is unrivaled in its depth of experience and expertise. This team includes the inventor of BluTag, BluBand, BluBox, BluHome and Stalker Alert, the founder of the largest for-profit corrections corporation and leaders in the fields of community corrections and electronic monitoring. We offer supervising agencies unparalleled experience and insight into solutions for using and integrating proven technology into its operations while preserving scarce resources.

We are committed to providing the most reliable and proven enrollee monitoring system along with outstanding customer service. We do not take our customers for granted and diligently work to establish long-term relationships with them. We value customer input because many of the enhancements and upgrades to our system are a direct result of our customers sharing their ideas with us.
