

STALKER ALERT

{victim notification device}

Timely receipt of information about the location of a perpetrator is critical to helping victims of domestic violence stay safe. Developed by STOP, Stalker Alert warns victims on the proximity of the perpetrator by using GPS technology, mobile zones and nationwide cell phone service.

HOW IT WORKS

The victim is given a Stalker Alert device and instructed to carry it around at all times in a briefcase or handbag or attach it to the victim's belt or waistband. The perpetrator's supervising agent creates a circular mobile exclusion zone around the victim, which moves with the victim. The size of the zone is based on the order of protection. Because this is an exclusion zone, the perpetrator cannot enter it without immediately setting off a violation notification.

If the perpetrator enters the mobile exclusion zone, Stalker Alert immediately recognizes the violation. Using AT&T or T-Mobile cell phone networks, Stalker Alert transmits the information to VeriTracks, so the perpetrator's supervising agent and other designated individuals receive the information in near real time and can take appropriate action. At the same time, Stalker Alert performs two actions to alert the victim to the perpetrator's proximity: begins emitting an audible tone and sends a text message to the victim's cell phone.

STALKER ALERT HIGHLIGHTS

- > Small, lightweight device uses GPS technology, mobile exclusion zones and nationwide cell phone networks to communicate with the victim, supervising agent and law enforcement officials.
- > Operates for at least 48 hours on a single charge and the battery recharges in one hour every 24 hours.
- > Even while charging the battery, the device continuously monitors the proximity of the perpetrator.
- > Weighs less than seven ounces and its dimensions are 4.7" x 3" x 1.1".
- > Works with BluTag and VeriTracks.
